

Electrical Requirements Update June 23, 2015

Many lake area Fire Protection Districts and municipalities have adopted inspection and permitting requirements for docks within their jurisdictional boundaries. The list below should help clarify the necessary documentation that must be submitted with new, modification and transfer dock permit applications:

- All requests for new dock and dock modifications within participating fire districts (FD) or municipalities must include a FD or municipality permit or receipt from the FD or municipality showing that the application has been submitted
- All requests for transfers within the Village of Four Seasons, Lake Ozark and Osage Beach must include an approved electrical inspection within the past 12 months. It is highly recommended that the inspection is requested when the house is listed. The Sunrise Beach Fire Protection District recently revised their electrical ordinance requiring inspection at the time of transfer. This requirement will take effect in their District beginning June 23, 2015. All requests for a dock permit transfer where a dock has not been installed but an electrical permit has been issued within the past year do not require a FD transfer inspection.
- New dock, dock modifications and new permits for existing un-permitted docks outside of participating fire districts must adhere to the Ameren dock electrical standards, but there is no certification or acknowledgement required with the permit applications.
- Dock Transfers outside of the Village of Four Seasons, Lake Ozark and Osage Beach FD's (Sunrise Beach will become part of this list on June 23, 2015) are not required to provide electrical inspection at the time of transfer.

For additional information including maps showing participating fire districts visit Ameren Missouri's shoreline management website at:
